Vortex Flow Meter

Multi-Parameter

DVE

- Measuring range
  Liquids: 5.2 - 157 ... 284 - 85 371 m³/h
  Air: 89 - 1 463 ... 26 915 - 2 467 081 Nm³/h
  (20 °C, 0 bar rel)
  Saturated steam: 81 - 938 ... 22 435 - 1 324 739 kg/h
  (0 bar rel)
- Accuracy:
  ± 1.2 % of reading (liquids)
  ± 1.5 % of reading (gases and steam)
- p_{max}: 100 bar abs; t_{max}: 260 °C (400 °C)
- Connection (insertion version):
  flange or thread via
  compression fitting or packing glands for
  tubes DN 80 ... DN 600 (3" ... 24")
- Material: stainless steel
- Multi-Parameter version with 5 process factors flow, temperature, pressure, energy consumption, density
- Output:
  1(3) analogue output, 1(3) limit switches, totaliser pulse, HART® Protocol, Modbus
- ATEX, IECEx
- Energy consumption (monitoring)

Despriction

The KOBOLD Vortex Flow meter DVE utilises three primary sensing elements: **a vortex shedding velocity sensor**, **a RTD temperature sensor** and **a solid-state pressure transducer** to measure the mass flow rate of gases, liquids and steam.

Systems that use external process measurements may not provide adequate compensation for the fact that process conditions can change radically between the point of velocity measurement and the point where upstream or downstream pressure and temperature measurements are being made.

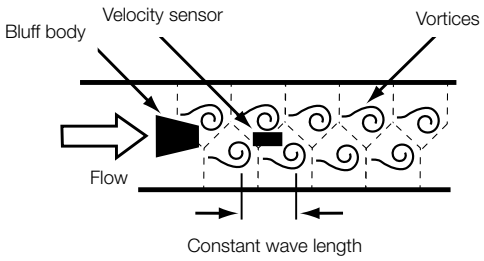
Because the DVE multivariable flow meter measures all of these parameters in **a single location**, it delivers a more accurate process measurement.

Integrating multivariable output capability with a single line penetration also simplifies system complexity and helps reduce initial equipment cost, installation cost and maintenance costs.

Advantages of the DVE Vortex Flow meter

- DVE-V provides cost effective volumetric flow monitoring solution for most low-viscosity liquids
- DVE-T incorporates temperature sensing to provide a compensated mass flow reading of saturated steam
- DVE-P multivariable meter delivers mass flow, temperature, pressure and density readings
- Connections: ANSI 3" up to ANSI 24", DN 80 up to DN 600
- Easy to install and commission
- Field- configurable ranges, outputs and displays
- HART® Protocol, Modbus
- IECEx / ATEX
- Energy consumption (monitoring)

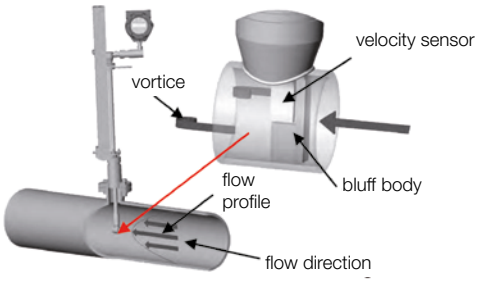
Measuring Principle



The measuring principle is based on the Karman vortice street. A specially shaped bluff body is located in direction of the flow. From a certain flow velocity on vortices are generated through the bluff body.

These small vortices generate small pressure differences which are sensed from a piezoelectric sensor behind.

The number of vortices is directly proportional to the flow velocity and will be converted into a frequency signal.



Model DVE-V

The Model DVE-V delivers a direct reading of volumetric flow rate - generally the most costeffective solution for liquid flow monitoring - in applications ranging from general water flows to hydrocarbon fuel flow measurement.

Model DVE-T

The Model DVE-T integrates a precision Pt1000 platinum RTD temperature sensor that can be used to calculate and output a compensated mass reading. This device is typically used to measure flow rates of saturated steam.

Model DVE-P

The Model DVE-P offers you flow computer functionality in a compact field device. This multivariable instrument incorporates temperature and pressure sensors to provide an instantaneous reading of compensated mass flow rate of gases, liquids and steam. In addition to outputs for totalised mass and alarm settings, the field-configurable electronics deliver up to three analog (4 - 20 mA) outputs of five process measurements, including volumetric flow rate, mass flow rate, pressure and density.

Model DVE-M/E

The Model DVE-M/E Energy Monitoring option permits real-time calculation of energy consumption for a facility or process. The meter can be programmed to measure steam, hot water or chilled water.

The flow meter DVE-E monitors one side of the process, either sent or return, and uses the input from a second separate temperature sensor on the opposite leg of the process to calculate the energy consumption over the temperature difference and flow. (Not approved for custody transfer applications).

Selectable energy units include:

Btu, joules, calories, Watthours, Megawatt-hours and horsepower-hours.

The local or remote electronics indicates: temperature, delta T, mass total and energy total.

Technical Details

Mass flow rate accuracy: for gas and steam based on 50-100% of pressure range

Model DVE accuracy

Process variables	Liquids	Gas/Steam
Volumetric Flow Rate	± 1.2% of reading	± 1.5% of reading
Mass Flow Rate	± 1.5% of reading	± 2.0% of reading
Temperature	± 1 °C ; ± 2 °F	± 1 °C ; ± 2 °F
Pressure	± 0.3% of full scale	± 0.3% of full scale
Density	± 0.3% of reading	± 0.5% of reading

Repeatability

Mass flow rate: ± 0.2% of rate
Volumetric
Flow rate: ± 0.1% of rate
Temperature: ± 0.1 °C, (± 0.2 °F)
Pressure: ± 0.5% of full scale
Density: ± 0.1% of reading

Stability over 12 month

Mass flow rate: ± 0.2% of rate
Volumetric
Flow rate: ± negligible
Temperature: ± 0.5 °C, (± 0.9 °F)
Pressure: ± 0.1% of full scale
Density: ± 0.1% of reading
Response time: adjustable from 1 ... 100 s

Process and ambient temperature

Standard: -200 ... 260 °C, (-330 ... 500 °F)
High temperature: up to 400 °C, (750 °F)
Ambient temperature: -40 ... 60 °C, (-40 ... 185 °F)
Storage temperature: -40 ... 65 °C, (-40 ... 185 °F)

Pressure ratings

Pressure sensor			
Max. operating pressure		Max. overload pressure	
psia	bar abs	psia	bar abs
30	2	60	4
100	7	200	14
300	20	600	40
500	35	1000	70
1500	100	2500	175

Stem and vortex sensor head: PN100
Compression fitting: PN 100
Packing gland: PN 64 (600 lbs)
Pressure ratings of process connection acc. specification: see model code

Auxiliary energy

Model DVE-V: 12 - 36 V_{DC}, loop powered
Model DVE-P, DC option: 12 - 36 V_{DC}, 300 mA max
Model DVE-P, AC option: 85 - 240 V_{AC}, 50/60 Hz, 5 Watt
Display: alphanumeric 2-line (16 characters) digital LCD Display rotateable in 90° steps
Buttons: six buttons for full field configuration the pushbuttons can be operated with magnetic wand without removal of enclosure covers.

Output signals

Analogue: 4 - 20 mA loop powered for volumetric meters
Alarm: solid state relay 40 V_{DC}
Totaliser pulse: 50 ms 40 V_{DC}
Volumetric: 1x analogue, 1x totaliser pulse, HART®
Multivariable: up to 3 analog signals 3 alarms, 1 totaliser pulse, HART®
Option: Modbus process monitoring

Wetted materials

Material: stainless steel 1.4404 (316L)
Models with pressure transducer: Dupont Teflon® based thread sealant
Version standard temperature: Dupont Teflon® packing
High temperature: Graphit based packing

Piping conditions

Conditions	Pipe diameters D	
	Upstream	Downstream
one 90° elbow before meter	**10 D**	**5 D**
two 90° elbows before meter	**15 D**	**5 D**
two 90° elbows before meter (out of plane)	**25 D**	**5 D**
Reduction before meter	**10 D**	**5 D**
Expansion before meter	**20 D**	**5 D**
Partially open valve	**25 D**	**5 D**

Velocity range

Liquids

Maximum velocity: 9 m/s (30 ft/s)

Minimum velocity: 0.3 m/s (1 ft/s)

Gas/stream

Maximum velocity: 90 m/s (300 ft/s)

Minimum velocity:

$$v_{min} = \frac{6.1}{\sqrt{\text{Density}\ (\frac{kg}{m^3})}}\ \frac{m}{s} \qquad v_{min} = \frac{5}{\sqrt{\text{Density}\ (\frac{Lb}{ft^3})}}\ \frac{ft}{s}$$
